Who we are

At Moolya Software Testing Private Limited, we lead globally in software testing and quality assurance, partnering with clients across industries to deliver top-tier solutions. Our services ranging from functional and automation to performance and security testing are designed to enhance software quality, efficiency, and productivity, ensuring client success and satisfaction.

Why Choose us

Skin in the Game

We go beyond vendor roles, fostering deep co-ownership with customers.

Culture Focus

We help customers address issues by focusing on cultural fixes.

Leadership Friendly

Moolya empowers C-, V-, and D-level leaders with insights.

Scaling Value

Moolya unifies Tech, Test, Product, Customer & Business insights to scale value.

Why Now?

AI adoption is accelerating across large language models, computer vision, and recommendation systems. Unlike traditional software, outputs are non-deterministic, creating new challenges for testing.

Emerging AI Quality Challenges

These challenges surface as hallucinations, bias, drift, and gaps in audit readiness.

Rising Regulatory Pressure

Regulators such as the EU AI Act, DPDP, and ISO 42001 are making evidence-driven quality assurance mandatory.

Expanding Market Demand

Industry forecasts estimate that the AI market will grow at a CAGR of nearly 37% between 2024 and 2030, creating a significant demand for structured QA governance.

The Challenge

Traditional QA approaches do not fully apply to AI systems. There is no fixed “**expected versus actual**” truth, and quality risks tend to emerge gradually rather than immediately.

Hidden Bias Risk

Bias can remain hidden, affecting fairness and decision-making.

Model Drift Challenges

Model drift leads to silent performance degradation over time.

Fragmented Tooling

Fragmented tools across the ecosystem reduce release velocity.

Talent Gaps in AI QA

Specialized QA talent for AI testing is still limited in availability.

Quality Assurance Gaps

Studies show that nearly 60% of reported AI issues are linked to insufficient or incomplete quality assurance practices.

Our Philosophy

We believe innovation and trust must grow hand-in-hand, with quality in AI defined not by perfection, but by making risks visible, measurable, and governable.

“Don’t become AI rich and trust poor.”

Clarity in Quality

Use AI only where quality can be clearly measured and governed.

Balanced Innovation

Focus on innovation with responsibility, so adoption scales safely.

Proven Acceleration

Structured QA governance drives 25–35% faster AI adoption.

Introducing MoolyAImpact

MoolyAImpact is a productised QA service that spans the full AI lifecycle — from clean data to monitored production environments. Delivered as a ready service pod, it eliminates the need for internal talent ramp-up.

Lifecycle Coverage

The lifecycle coverage includes Data, Model, Scenario, and Production.

Seamless Integration

The solution integrates seamlessly into existing pipelines and workflows.

Service Pod Team

Each client receives a service pod that includes an AI QA Lead, SDETs, an Analyst, and a Red-Team Engineer.

Rapid Onboarding

On average, clients are able to integrate MoolyAImpact within two to four weeks.

Service Stack (How We Do It)

Our service stack transforms theory into execution. It combines risk discovery, automated gates, advanced testing, and governance frameworks into one unified pipeline.

S:No	Layer	What We Deliver
01	Discovery & Risk	A comprehensive risk register and compliance mapping
02	Data	Schema checks, bias analysis, and drift gates embedded into CI/CD
03	Model	Property-based testing, metamorphic testing, and adversarial testing
04	Scenario	Synthetic flows, replay validations, and operational dashboards
05	Production	Continuous monitoring for drift, hallucinations, and latency
06	Governance	Audit-ready dossiers and traceability frameworks

More than 90% of compliance controls can be auto-validated in each release cycle.

MoolyAImpact — Practical Assurance for AI-Powered Platforms

Modern AI-driven platforms leverage intelligent search, automation, and analytics to enhance support efficiency and user experience. As these systems grow in complexity, ensuring reliability, performance, and AI accuracy becomes mission-critical.

MoolyAImpact's Quality Framework delivers assurance across these dimensions through a dual-layer model that unifies functional testing, API validation, and AI behaviour evaluation — enabling measurable reliability, accuracy, and transparency.

Technical QA

- Validate APIs and data flow.
- Measure latency and failover.
- Automate repeatable checks.

Functional QA

- Run real query variants.
- Check accuracy and relevance.
- Find model/data gaps.

AI Quality Signals

- Detect bias and drift.
- Recheck after model updates.
- Track accuracy and latency.

Expected Outcomes : Consistent AI response accuracy, Strong system reliability, Lower production risks.

Deliverables: Defect Matrix, Accuracy Dashboard, Test Suites

Execution Model and Governance

Unified QA Framework

MoolyaImpact's integrated QA model provides end-to-end validation across applications and AI components, ensuring consistent coverage of shared APIs, workflows, and models.

This unified approach eliminates redundancy, enhances visibility, and accelerates feedback loops.

Collaboration Framework

Shared Defect Board: Unified view of application + AI issues.

Central Automation Repository: Common scripts and assets.

AI QA Huddles: Monthly sessions for drift and signal tracking.

Discover

- Conduct workshops to map systems, data flows, and dependencies.
- Perform API mapping and define baseline integration parameters.
- Deliver a System QA Map with module-level coverage.

Design

- Build a Coverage Matrix aligning APIs, workflows, and AI models.
- Define validation criteria, data needs, and performance thresholds.
- Finalize a QA Plan with ownership, timelines, and cadence.

Execute

- Use FastTrack Automation for API and workflow tests.
- Run functional, cross-system, and AI behavior validations.
- Report reliability, accuracy, and defect trend metrics.

Evolve

- Share knowledge and maintain common repositories.
- Manage unified defect tracking and automation libraries.
- Hold weekly / monthly AI QA huddles and update the QA Playbook.

Metrics, Impact, and Next Steps

Success Metrics

Metric	Purpose
API Reliability	Ensures stability and data integrity
Response Accuracy	Proves AI precision and relevance
AI Regressions	Maintains quality and trust

Strategic Value Proposition

MoolyAImpact's Framework ensures technical precision and AI integrity by:

- Keeping APIs and data pipelines reliable.
- Ensuring AI responses are factual and consistent.
- Applying verifiable QA for every release.

This delivers practical assurance that AI in Service Cloud and KSP is reliable and production-ready.

Outcomes (Pain → Change → KPI Lift)

MoolyAlmpact converts QA challenges into measurable business improvements by accelerating releases, improving resilience, and simplifying compliance preparation.

S:No	Pain	MoolyAlmpact Change	KPI Lift
01	Difficulty proving model safety	Compliance gates validate builds at every stage	70% reduction in hotfixes
02	Manual evaluations that take weeks	Automated evaluations complete in less than 15 minutes per PR	2–4× faster release velocity
03	Errors that impact customers	Drift monitors automatically raise tickets for issues	60% fewer user-raised issues within three months
04	Long audit preparation cycles	Conformity dossiers generated with every release	Audit prep time reduced from weeks to days

Teams using MoolyAlmpact have reported 30–40% cost savings in QA cycles within the first year of adoption.

Thank You!
