Countries

Who we are

A global leader in AI-driven engineering, focused on building scalable, secure, and intelligent platforms that drive meaningful business outcomes. We partner with forward-looking organizations to develop high-impact products powered by advanced technologies, including Natural Language Processing (NLP), Generative AI, and sophisticated data analytics. Our capabilities span AI platform engineering, software development, and quality assurance, enabling our clients to achieve reliable, measurable results.

Why Choose us

Skin in the Game

We go beyond vendor roles, fostering deep co-ownership with customers.

Culture Focus

We help customers address issues by focusing on cultural fixes.

Leadership Friendly

Moolya empowers C-suite, VP, and Director-level leaders with insights.

Scaling Value

Moolya unifies Tech, Test, Product, Customer & Business insights to scale value.

Executive Overview

Spinny is scaling engineering velocity while maintaining high release confidence.

This engagement embeds AI-powered test intelligence and agentic execution into Spinny's QA lifecycle to systematically reduce manual effort, increase coverage, and provide leadership-grade quality visibility.

The objectives over 12 months are:

- Reduce repetitive manual effort through AI-assisted test generation & execution
- Institutionalize structured test case management across modules
- Establish agentic execution for prioritized UI and API workflows
- Enable requirement-to-test traceability across business journeys
- Provide executive-level quality dashboards with risk visibility
- Preserve product and defect intelligence beyond individuals
- Improve release confidence while increasing engineering velocity
- Shift QA from execution-heavy to insight-driven quality engineering

Engagement Objectives

By Month 6:

- AI-assisted test case generation integrated into sprint planning.
- Agentic execution covering prioritized test flows.
- API validation automated for key integrations.
- Executive visibility enabled through unified dashboards.
- Measurable shift in manual regression effort.
- Structured test repository with traceability established.

By Month 12:

- AI fully embedded into Spinny's standard QA workflow.
- Majority of high-repeatability user journeys agent-enabled.
- Context retained across releases through knowledge capture.
- Human effort strategically allocated to exploratory and edge-case testing.
- Mature executive reporting cadence aligned to release cycles.
- Standardized AI-augmented testing model operational across modules.

- Structured Test Case Management
- Issue Tracking
- Requirement Management
- Traceability Matrix
- AI-assisted Issue Reporting
- Cross-tool Integrations
- Test Run Tracking
- Centralized Reporting

Platform Components

Testpert – AI Test Intelligence Engine

Encodes applied testing methodology into an intelligent system that:

- Learns Growth Driven Testing methodology, Domain Context and Product Workflows.
- Generates structured test cases covering business-critical scenarios.
- Identifies missing requirements proactively and highlights associated risks early to minimize downstream impact.
- Asks contextual questions to clarify requirements and uncover gaps.
- Leverages past incidents to strengthen test cases in upcoming sprints.
- Preserves product knowledge institutionally.
- AI-powered expert judgment built on 15 years of Moolya's testing methodology.
- Reduces costs through context retention and sustained quality

The screenshot displays the 'Test Cases' management interface. On the left, a sidebar shows a hierarchical tree of categories: All, Automation, Human Tests, Buyer (selected), Seller Entry and Car Ide..., Car Identification, Location Selection, Car Details Collection, Selling Intent Capture, Mobile Number Verifica..., Online Price Estimation, Evaluation Scheduling, Evaluation Management, and Buyer's Journey. The main area shows a list of test cases under the 'Buyer/Business Critical Flows' category. Each row includes a test case ID, a severity level (CRITICAL or HIGH), and a description.

Test Cases		
Search		
Filter Sort + Add Test Case		
Buyer/Business Critical Flows 8		
TES171	CRITICAL	Security of financial transactions
TES170	HIGH	Notification system reliability
TES169	HIGH	Refund processing accuracy
TES168	CRITICAL	Handling concurrent reservations
TES167	HIGH	Detailed car pages loading performance
TES166	CRITICAL	Real-time inventory updates during browsing
TES164	CRITICAL	Filtering accuracy across multiple criteria
TES53	CRITICAL	Reservation Prompt During Vehicle Selection

Platform Components

Browser Agent Execution

- Natural language-driven browser orchestration
- Flow-based validation
- Test execution for repeatable journeys
- Execution traceability and logs

User Journey Module

- Visual representation of product workflows
- Requirement-to-test traceability
- Coverage clarity across modules

API Agent Execution

- API contract validation
- Integration workflow checks
- Structured request/response validation
- Continuous regression coverage

Eagle Eye – Executive Dashboard

- Severity-based issue clustering
- Feature-level risk visualization
- Consolidated quality health view

Hosting & Security Framework

Deployment model options

- Dedicated cloud instance
- *On-premise deployment

Security and governance:

- Role-based access controls
- Scoped project-level context storage
- Execution logs retained for review
- Controlled environment access
- No external exposure without authorization

Engagement Structure

Phase 0: 15-Day Discovery Sprint

Objective: To enable Spinny to actively use the platform during the Discovery phase while establishing feasibility and demonstrating initial impact.

Deliverables:

- AI-generated test cases with coverage insights.
- Agentic UI and API execution cycle.
- API execution results with validation summary.
- Browser Agent Execution report.
- Executive dashboard preview.
- Structured Test Case Repository.
- Bug Report.

12-Month Maturity Roadmap

Phase 1

Foundation

(Month 1-2)

- Data Collection - PRD, Figma Designs, Issues, Existing Test cases, etc.,
- Dataset Generation
- Retraining the Model
- Create a Stronger Context
- Jira Integration
- First set of Test Cases Generation
- Tier 1 regression flows automated
- Browser and API Agent Execution
- User Journey & Eagle Eye configured
- Weekly execution reviews

Phase 2

Acceleration

(Month 3-6)

- Coverage expansion across modules
- Sprint-level AI refinement
- Increased regression percentage
- Generation of test cases from past issues and incidents
- Reduced manual test design effort
- Executive reporting cadence established
- Continuous platform improvement and refinement
- Enable and train Spinny team on the platform
- Configure secure VPN access for the agent to execute tests within the client network.

Phase 3

Institutionalization

(Month 7-12)

- Expanded execution footprint
- Reduced Human dependency
- Compounding contextual intelligence
- Continuous optimization cycles
- Standardized AI-augmented testing model

Test Coverage Prioritization Model

Test coverage rollout follows structured tiers:

- **Tier 1 – High Repeatability Flows**
 - Login
 - Core browsing
 - Key transactional journeys
- **Tier 2 – Structured Business Logic Flows**
 - Role-based access flows
 - Conditional scenarios
 - Feature-driven journeys
- **Tier 3 – Dynamic / Edge Flows**
 - Highly dynamic UI components
 - Complex conditional paths

Spinny Collaboration Requirements

To enable successful implementation:

Controlled Environment Access

Access to staging/test environments.

Integration Documentation

API documentation and integration specs.

Release Cycle Alignment

Alignment with release cadence.

Dedicated QA Coordination

QA SPOC for coordination.

Architecture Enablement Overview

Architecture overview during activation phase.

Success Metrics Framework

Dimension	Month 3	Month 6	Month 12
AI-assisted test case creation	Active	Embedded	Standard
UI agent coverage	Core flows	Expanded	Majority coverage
API Execution	Selected APIs	High-frequency APIs	Continuous
Executive visibility	Enabled	Mature	Institutionalized
Manual regression effort	Optimized	Reduced	Strategically allocated

Engagement Outcomes

AI-Driven QA

AI embedded into Spinny's QA lifecycle

Knowledge Base

Institutionalized product knowledge

Execution Maturity

Structured execution maturity

Release Confidence

Improved release confidence

Effort Optimization

Optimized human effort allocation

Quality Visibility

Leadership-level quality clarity

Assumptions & Dependencies

To enable successful implementation:

| Environment & Access

- Spinny will provide timely access to required staging/test environments.
- Required credentials and permissions will be provisioned for approved personnel.
- Test environments will be stable during agentic execution validation cycles.
- CI/CD pipeline integration points will be made available as needed.

| Documentation & Knowledge Inputs

- API documentation and integration specifications will be shared for execution enablement.
- Product workflows and key business journeys will be explained during activation.
- Historical defect patterns and regression scope (if available) will be shared to accelerate contextual learning.

Assumptions & Dependencies

| Collaboration & Governance

- A designated QA/Engineering SPOC will be assigned for coordination.
- Sprint cadence alignment will be maintained for AI refinement cycles.
- The Spinny team will provide a timely review on deliverables to ensure smooth progress and refinement.

| AI Learning Model

- AI-assisted test generation and agentic execution improve through sprint-level refinement.
- Context builds incrementally as product exposure increases.
- Milestones will be evaluated against defined maturity levels rather than single-point outcomes.

Assumptions & Dependencies

| Change Management

- Significant product architecture changes may require recalibration of agentic flows.
- New feature introductions will be incorporated into execution cycles through structured planning.

| Commercial Structure

- Engagement duration is 12 months including the 15-day activation sprint.
- Onsite senior deployment is planned for the first two months.
- Scope expansion beyond defined modules will be evaluated jointly.

Technical Prerequisites

The Engagement is designed to operate with minimal setup requirements. The following prerequisites enable activation and contextual learning:

| AI Environment Configuration

- Creation of a dedicated AI instance configured for the Spinny project.
- Generation of a project-specific API key for controlled access.

| Environment Readiness

- Availability of staging or test environment for initial execution cycles.
- Access to relevant APIs for validation workflows.

| Context Enablement

- Foundational walkthrough of Spinny's domain and core product workflows.
- High-level architecture orientation during activation phase.

| Data Scope

- Test data availability within approved environments.
- No production data access required for activation

Commercial Structure

Cost Component	Month 1-6	Month 7-12
Product Cost	₹ 1,80,000	₹ 1,80,000
Team Cost	₹ 2,75,000	₹ 2,00,000
Total / Month	₹ 4,55,000	₹ 3,80,000

Includes:

- Includes tokens worth ₹30,000 / Month. Any additional token usage beyond this will be billed on actuals.
- Full platform access (**Bugasura + Testpert + Agentic Modules**).
- Two QA Engineers (1 Product COE and 1 Senior ET).
- Onsite Deployment of the Senior ET will be done in Month 1.
- Product COE can be off-boarded after Month 6.

Note - On-premise deployment will be priced separately and is subject to detailed technical evaluation and scope assessment.

Post 12-Month Continuation

After the initial 12-month maturity cycle, the engagement will transition into a sustained value phase focused on:

Expanded AI Coverage

Scaling agentic execution and AI intelligence across additional modules and evolving product areas.

Optimization & Efficiency

Further reduction in manual effort through continuous refinement and performance tuning.

Enterprise Rollout Model

Flexible commercial options- platform-only, hybrid support, and expanded AI-led QA transformation.

A revised commercial proposal and detailed Statement of Work (SoW) will be shared in the 11th month, aligned to the achieved maturity level and Spinny's forward roadmap.

Why Moolya

Engineered Delivery . Proven Methodology . Measurable Impact.

- 15+ years methodology encoded into Testpert
- Real-world domain onboarding model
- Onsite Senior ET Month 1–2
- Institutional knowledge retention model
- Cultural alignment (not tool replacement, but enablement)
- Strategic Quality Partnership enabling scalable quality engineering maturity

Next Steps

Proposal review and alignment discussion

Agreement on success metrics and evaluation criteria

Activation and onboarding of the Bugasura platform for Spinny usage

Thank You!
