Industry leaders choose us

Who **we** are

At Moolya Software Testing Private Limited, we are a global leader in AI-driven engineering solutions, specializing in creating scalable, secure, and intelligent platforms that transform business outcomes. We collaborate with forward-thinking organizations to build high-impact products that leverage cutting-edge technologies such as Natural Language Processing (NLP), Generative AI, and advanced data analytics. Our expertise spans across AI platform engineering, software development, and quality assurance, ensuring measurable success for our clients.

Why **Choose us**

Skin in the Game

We go beyond vendor roles, fostering deep co-ownership with customers.

Culture Focus

We help customers address issues by focusing on cultural fixes.

Leadership Friendly

Moolya empowers C-, V-, and D-level leaders with insights.

Scaling Value

Moolya unifies Tech, Test, Product, Customer & Business insights to scale value.

Executive Summary

Italica, a leading name in plastic furniture and material handling solutions, has built a strong nationwide network of distributors and channel partners. As this network expands, managing orders, communication, and engagement across multiple channels has become increasingly complex. Current semi-manual processes limit visibility, slow coordination, and affect overall partner experience.

To streamline the distributor and channel partner operations, Italica aims to develop a **unified Channel-Partner Order Processing Platform** that digitizes the entire order life cycle from product browsing and order placement to fulfillment tracking and communication. The platform should also serve as a **digital engagement hub**, where channel partners can receive product updates, promotions, and company announcements through a curated **feed**, and connect directly with support or sales teams via **voice-based interactions**.

Solution Overview

Moolya proposes a cloud-native, scalable, and secure platform comprising:

Mobile Applications (iOS & Android)

For Channel Partners and Distributors, focused on usability, offline access, and real-time updates.

Web Application

For Company Admins, Super Admins, and Support Teams for catalog, pricing, approvals, analytics, and feed management.

Integrated Voice-Chat module

To enable partners to track orders or resolve queries by directly speaking with the responsible teams.

Feed & Notification Engine

To deliver timely business updates and announcements, enhancing partner engagement and transparency.

The solution will be developed under a Time & Material (T&M) engagement model, ensuring flexibility, transparency, and iterative delivery aligned with Italica's evolving business priorities.

High Level Delivery Timeline & Phasing

Phase	Duration	Key Deliverables
Phase 0 – Discovery & Design	~0 – 2 Months	Requirement finalization, architecture, security review, wireframes for mobile and web, API contracts
Phase 1 – MVP Development	~2 – 4 Months	Core modules: Auth, Catalog, Order placement, Feed (CMS + app), Voice connect (basic), Notifications, Admin portal, CI/CD setup
Phase 2 – Feature Expansion & Integrations	~4 – 6 Months	Bulk order workflows, Approvals, ERP/WMS/Payment gateway adapters, Support dashboard with full voice queue management, Analytics
Phase 3 – Stabilization & UAT	~4 – 6 Months	System testing, performance optimization, penetration testing, documentation, UAT with pilot group
Total Estimated Duration	~8 – 9 Months	Full delivery including pilot rollout and stabilization

Note:

This duration reflects realistic velocity, buffer for third-party dependencies (voice SDKs, integrations), and sufficient QA hardening.

Recommended Team Composition

A cross-functional team to deliver the platform efficiently under T&M:

Role	Count	Key Responsibilities
Solution Architect	1	Overall architecture, technology decisions, reviews
Technical Lead / Engineering Manager	1	Sprint leadership, code quality, cross-module coordination
Backend Engineers	3	API, DB, integrations, voice orchestration, feed, notifications
Mobile Engineers (React Native)	2	iOS & Android app development
Frontend Engineers (Web Admin)	2	React/Next.js admin portal, dashboards, CMS
QA / SDET Engineers	1	Test automation, regression, performance testing
DevOps Engineer	1	CI/CD, cloud infra, monitoring, scaling
UI/UX Designer	1	End-to-end product design (mobile & web)
Product Owner	1	Requirement grooming, backlog management

Technology Stack

Layer	Technology / Framework	Purpose
Mobile App	React Native	Single codebase for iOS & Android; excellent performance and maintainability
Web Application	React + Next.js + TypeScript	Responsive admin console, dashboards, CMS
Backend Services	Node.js + NestJS (TypeScript)	Modular microservice architecture (Auth, Catalog, Order, Feed, Voice)
Database	PostgreSQL	Relational, scalable, with Row Level Security (RLS) for multi-tenant data separation
Cache / Session	Redis	Caching, session store, rate limiting
Search Engine	ElasticSearch / OpenSearch	Product catalog and feed indexing
Voice SDK	Agora / Twilio Programmable Voice	Low-latency VoIP, recording, transcription, routing
Storage	AWS S3 + CloudFront	Object storage for media, invoices, and recordings

Technology Stack

Layer	Technology / Framework	Purpose
Notifications	Firebase Cloud Messaging (FCM) + APNs	Unified push for Android & iOS
Infrastructure & CI/CD	AWS (EKS or ECS) + Terraform, GitHub Actions	Cloud deployment, automation, infrastructure-as-code
Monitoring & Logs	Prometheus + Grafana, ELK / Datadog	Observability, performance tracking
Security	OAuth2.0 / OIDC, JWT, TLS 1.3, AWS KMS	Authentication, encryption, and compliance controls

Thank You!
