Industry leaders choose us

Who we are

At Moolya Software Testing Private Limited, we are a global leader in AI-driven engineering solutions, specializing in creating scalable, secure, and intelligent platforms that transform business outcomes. We collaborate with forward-thinking organizations to build high-impact products that leverage cutting-edge technologies such as Natural Language Processing (NLP), Generative AI, and advanced data analytics. Our expertise spans across AI platform engineering, software development, and quality assurance, ensuring measurable success for our clients.

Why Choose us

Skin in the Game

We go beyond vendor roles, fostering deep co-ownership with customers.

Culture Focus

We help customers address issues by focusing on cultural fixes.

Leadership Friendly

Moolya empowers C-, V-, and D-level leaders with insights.

Scaling Value

Moolya unifies Tech, Test, Product, Customer & Business insights to scale value.

Objective

To ensure a successful pilot of **TestPert** with **Indegene**, we need to train TestPert on your product, processes, and context. The goal is for TestPert to understand your domain and product deeply enough to generate **high-quality, context-aware test cases** aligned with your next sprint requirements.

The following information will help us achieve that goal efficiently.

We understand that not all information may be available immediately, our team will work closely with your designated point of contact to progressively gather and refine the inputs.

Pilot Scope Finalisation

Indegene is requested to define a limited, focused scope for the pilot.

This could be:

A module, workflow, or feature within an existing product.

A new product or enhancement in the early development stages.

A segment where high-quality test coverage and faster turnaround are critical.

The idea is to **keep the scope manageable but meaningful** enough to demonstrate TestPert's value.

Domain Knowledge

Information about the **domain your product operates in** such as healthcare, pharma, life sciences, or related areas.

This can include:

- Publicly available documentation, regulations, or workflows
(e.g., HIPAA, FDA, EMA guidelines, clinical trial data management norms).
- Any internal domain documents that may be shared under the Mutual NDA.
- Key business processes, terminologies, or data flows that your product interacts with.

(This helps TestPert contextualize test scenarios within your industry realities.)

Product Knowledge

This refers to knowledge directly tied to your product vision, use cases, and user experience. We request any material or artefacts that explain:

Product Overview

Mission, target users, and business goals.

Use Cases & User Stories

Sample workflows, personas, or example journeys.

Problem Statements & Market Promises

The “Why?” behind the product.

Feature Documentation or Decks

Slides, PRDs, or Demo recordings.

Known Assumptions or Constraints

Decisions that shape the system’s logic.

(This helps TestPert frame “what to test?” and “why it matters?”)

Technical Knowledge

Information that helps us understand how the product is built and runs, such as:

- Architecture diagrams and component overviews.
- APIs, feature sets, and technology stack used.
- Supporting platforms (AWS, GCP, Azure, etc.) and integrations.
- Database structures, cron jobs, scheduled tasks, and libraries.
- Access to sandbox/staging environments (if feasible).
- Any relevant developer or QA documentation.

(This ensures TestPert aligns its test logic with system behaviour, not just UI workflows.)

Process Knowledge

Insight into how your team develops, tests, and deploys products.

We'd appreciate:

- Your SDLC or Agile methodology details (e.g., sprint cadence, CI/CD approach).
- Historical testing challenges, gaps, or improvement goals.
- QA ownership structure (manual vs automation ratio).
- Toolchain currently in use for test management and defect tracking.
- Any retrospective notes or process learnings.

(This allows TestPert to fit naturally into your real-world delivery process.)

Collaboration Framework

To ensure smooth execution, we recommend:

A Champion from Indegene

A single motivated point of contact who understands the product and is invested in this pilot's success. Their ownership and feedback loop will be crucial in making this engagement a success story.

Joint Working Team

A small working group (1–2 members from Indegene, 2–3 from Moolya) for coordination, access, and review checkpoints.

Communication & Milestones

Moolya will set up periodic syncs to review progress, refine inputs, and share TestPert outputs for validation and fine-tuning.

Next Steps

Once the pilot scope is confirmed, Moolya will:

- Assign a TestPert Integration Lead.
- Set up initial data intake sessions.
- Train TestPert on available knowledge.
- Generate and validate test cases for your next sprint.
- Present measurable outcomes and learning recommendations.

Summary Table – Information Requested

Category	Examples
Scope of Product	Module or feature for pilot
Domain Knowledge	Domain context, terminology, regulatory docs
Product Knowledge	Product overview, use cases, PRDs, demo decks
Technical Knowledge	APIs, architecture, tech stack
Process Knowledge	QA methods, historical challenges
Champion / POC	Nominated representative

Outcome – Direct Outcomes

Dimension	Direct Outcomes
Speed	Test design time reduced by 70–80% through AI-assisted generation.
Coverage	Visual proof of journey coverage , with weighted analytics per stage and clear percentage test execution visibility.
Quality	Context-aware tests aligned with healthcare, pharma, and life sciences workflows.
API Agent	An autonomous agent that executes API tests, validates responses, and reports coverage gaps automatically.
LLM Fine-Tuning	A fine-tuned model trained on your product and process knowledge – ensuring every new test understands your domain deeply.
Insight	Actionable intelligence on effort distribution, test efficiency, and untested journeys – helping QA and Product leads prioritize.

Outcome – Indirect Outcomes

Strategic Dimension	Direct Outcomes
Scalability	A repeatable, low-dependency model that can be applied to multiple products, sprints, or teams.
Context Retention	Institutional memory – TestPert retains domain, product, and process context even if team members change.
Knowledge Reuse	Reuses and evolves historical test knowledge , ensuring edge cases and legacy scenarios remain covered.
Traceability	End-to-end visibility from requirement → journey → test → execution , ensuring regulatory and audit compliance.
Continuous Learning	With every sprint, TestPert learns from validation feedback – improving accuracy and coverage over time.

Pricing

Duration

4 – 5 Months

Pricing

\$5000

Payment Terms

- Payment to be done within 30 days of invoice generation.
- Any applicable taxes will be charged extra on the pricing mentioned.
- Invoice will be raised on the 25th of every month.
- As part of our standard operating procedures, Moolya ensures comprehensive insurance coverage including liability, security, cybersecurity, and employee welfare. Should there arise a necessity for project-specific insurance, such coverage will be procured and billed accordingly as a pass-through expense.

Thank You!
