The Challenge

Growing Defect Pile-Up

Defect backlogs grow while development sprints continue.

Manual Processes Drain Productivity

High defect leakage into production increases costs and customer dissatisfaction.

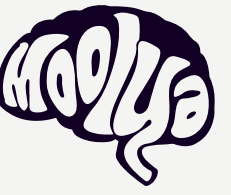

Delivery Delays from Legacy Issues

Feature delivery often gets delayed due to old unresolved bugs.

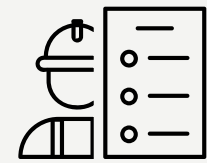

Impact of Defect Leakage

Manual defect resolution and validation consumes valuable engineering time.

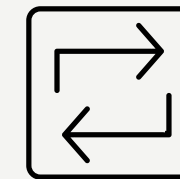

Moolya's Solution – BugBuster

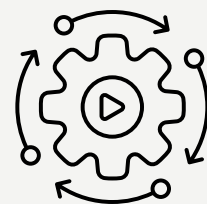

Focused Backlog Resolution

Dedicated engineering teams focusing solely on backlog clearance.

Dual-Track Execution

Parallel execution – backlog fixes while development sprints continue.

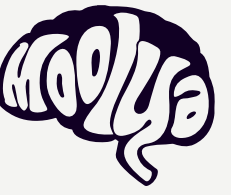

Automation-Led Validation

Automation-first validation of bug fixes with minimal manual intervention.

Preventive Quality Insights

Root cause analysis to prevent recurring defects and reduce future backlog.

Our Approach

Step 1

Backlog Audit and Prioritization

Identify high-risk and critical defects.

Step 2

Parallel Defect-Fixing Sprints

Fix while features are developed.

Step 3

Automation-driven Regression

Fast validation of fixes.

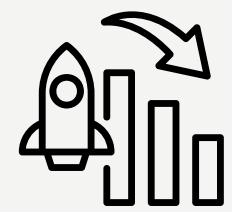

Step 4

Continuous Reporting and Analytics

Real-time visibility of backlog burn-down.

Business Impact

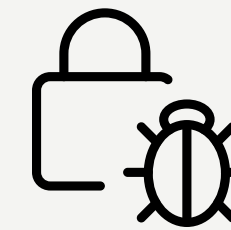

Rapid Backlog Impact

Accelerated backlog clearance – **up to 50% reduction** within **3 months**.

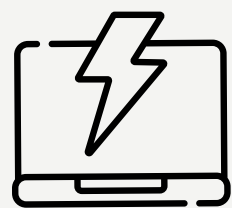

Cleaner, Faster Releases

Faster release readiness with cleaner builds.

Lower Production Defects

Reduced defect leakage to production by **20%-40%**.

Developer Productivity Boost

Improved developer focus on new features, boosting productivity.

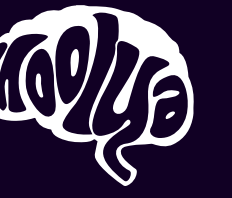

Happier End Users

Increased customer satisfaction with stable releases.

Why Moolya?

- Proven expertise in QA and engineering for complex systems.
- Hybrid approach combining engineering, automation, and testing.
- Seamless integration with your existing tools (Jira, Jenkins, GitHub).
- Data-driven defect analysis and prioritization.

Thank You!
